**THE WORLD'S BEST AIR FILTER**

# 57S

## PERFORMANCE AIRBOX

**NEW!**

### **THE WORLD'S BEST AIR FILTER™**

The 57S Performance Airbox features a washable and reusable oversized conical K&N High-Flow Air Filter.

### **COMPLETE AIRBOX ASSEMBLY**

Replaces the factory air filter housing with a fully enclosed injection molded air box to reduce sound and cool air. The airbox comes with a removable lid for servicing and a custom engineered Velocity Stack (Velum) designed to smooth and straighten airflow for added power.

### **GUARANTEED HORSEPOWER**

Aerodynamically designed to increase airflow and reduce turbulence, providing up to three times the power gains from a K&N Replacement Air Filter alone.

### **EASY INSTALLATION**

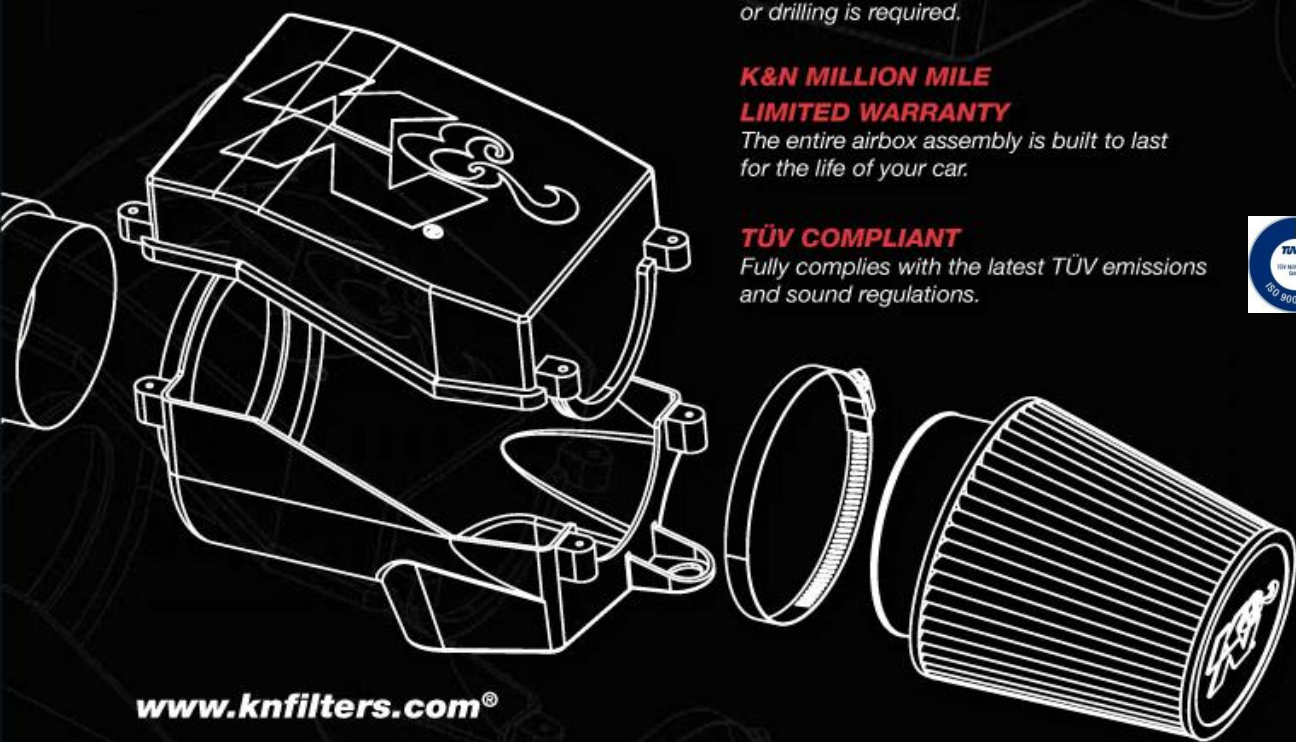

Specifically engineered to use factory holes and mounting points so no additional hardware, cutting or drilling is required.

### **K&N MILLION MILE LIMITED WARRANTY**

The entire airbox assembly is built to last for the life of your car.

### **TÜV COMPLIANT**

Fully complies with the latest TÜV emissions and sound regulations.

**K&N**  
THE WORLD'S BEST AIR FILTER

**AVAILABLE  
SPRING 2009**

**Part # 57S-9500**

Our 57S Performance Airboxes are brand new T.U.V. compliant intake systems developed by K&N, the inventor of the Million-Mile High-flow air filter. These systems increase horsepower and acceleration by dramatically reducing air flow restriction caused by the original factory design. A K&N 57S completely replaces the factory air box and air filter with upgraded high quality components. A 57S uses a fully enclosed air box assembly with a removable lid for easy access to the filter when cleaning is required. This innovative design delivers extra power and complies with the latest TUV emissions and sound suppression regulations. The 57S air box is injection molded for extra strength, consistency and durability. The 57S assembly is large enough to house an oversized conical K&N High Flow air filter and the entire product is backed by our Million Mile Limited Warranty. By reducing both air filter and air box restriction, these systems provide up to three times the power gains available with a K&N replacement air filter that go into the factory air box. The weakest link in the airflow "chain" robs a vehicle of its natural horsepower. Often that weak point is the factory air box itself, a problem K&N has solved with the 57S.

#### **GUARANTEED HORSEPOWER**

We will not sell a 57S system that does not provide a measured increase in horsepower and torque (Acceleration). Each system is proven to increase vehicle power at the wheels on a dynamometer (think treadmill for cars). These thoroughly engineered systems provide huge increases in power that a customer should feel when they accelerate. Typical gains on an 4 cylinder vehicle range between 4 and 7 horsepower. We have even tested engines that provide as much as 11 extra horsepower.

**Increase Up To 11 Horsepower!!**

### **EASY INSTALLATION**

Sounds complicated? That's the great part, these systems are easy to install. A typical installation can be done with a screwdriver, pliers and a ratchet set in 30 minutes. That's because we specifically engineer the kits to use factory holes and mounting points so they do not require any cutting or drilling. Our 57S Airbox is factory preassembled and custom designed for specific vehicles to fit right into the engine compartment.

### **TUV COMPLIANT**

Every K&N 57S Performance Airbox complies with TUV regulations governing emissions and sound levels. Each system has been submitted for testing and certified before being released for sales. So you have confidence that your 57S will deliver power without any worry about vehicle regulations.

### **THE WORLD'S FIRST MILLION-MILE WARRANTY**

K&N invented the world's first air filter guaranteed for one million miles. That same warranty stands behind our 57S Performance Airbox. Engineered with care and passion, these systems are built to last for the life of your car. We stand behind them completely.

### **SPECIFICATIONS**

Our 57S Performance Airboxes are injection molded from the same materials use in OE air boxes. Once installed, you will have a performance system with an "OE" look that looks as good as it performs. A 57S comes factory preassembles and has a removable lid to make servicing the washable air filter simple. Inside the 57S is the largest conical shaped High-Flow air filter we could fit into the system while still using factory holes and mounting points. This extra filter size provides even more airflow at lower restriction than a standard K&N O/E replacement filter that is limited to the size of the factory air box. The oversize air filter also captures and holds more dirt increasing the service life before a cleaning is required to 100,000 miles under normal on-highway driving conditions. The air box assembly is connected to the engine with adapters made from high strength materials such as silicon and reinforced nylon that ensures long life. Put all this together and you have the best T.U.V. compliant high-flow intake system available.
